## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 19 October 2022  |
|---------------|--|
| Team ID       | PNT2022TMID41492   |
| Project Name  | Predicting the energy output of wind farm based on weather conditions. |
| Maximum Marks | 4 Marks  |

## **Technical Architecture:**

**Table-1 : Components & Technologies:** 

| S.No | Component                       | Description  | Technology             |
|------|---------------------------------|--|------------------------|
| 1.   | User Interface                  | User can interact with web application                       | React JS               |
| 2.   | Application Logic-1             | Using python to create API's                                 | Python                 |
| 3.   | Application Logic-2             | Creating a model to Predict the data                         | IBM Watson STT service |
| 4.   | Application Logic-3             | Logic for a process in the application                       | IBM Watson Assistant   |
| 5.   | Database                        | To store user details and dataset                            | NoSQL                  |
| 6.   | Cloud Database                  | Database Service on Cloud                                    | MongoDB atlas          |
| 7.   | File Storage                    | -  | -                      |
| 8.   | External API-1                  | Encrypting the user name, password and communication details | NPM package encryption |
| 9.   | External API-2                  | Purpose of External API used in the application              | Aadhar API, etc.       |
| 10.  | Machine Learning Model          | Predicting the out of wind turbine using weather data        | Regression Model       |
| 11.  | Infrastructure (Server / Cloud) | -  | -                      |

**Table-2: Application Characteristics:** 

| S.No | Characteristics          | Description  | Technology                         |
|------|--------------------------|--|------------------------------------|
| 1.   | Open-Source Frameworks   | Using open source for external packages  | Technology of Opensource framework |
| 2.   | Security Implementations | For securing the details of the users  | Encryption algorithms.             |
| 3.   | Scalable Architecture    | The architecture used here is a 3tier architecture where a middleware is present to carry out the communication between client and server. | 3tier architecture.                |
| 4.   | Availability             | It's a web application   | React JS                           |
| 5.   | Performance              | 100 request per second for the server. We can also make higher number of requests per seconds by upgrading                                 | Server hosting                     |

| 4. | Availability | it's a web application                   | React js      |
|----|--------------|--|---------------|
| 5. | Performance  | 100 request per second for the database. | mongoDB atlas |
